**Partnering with RESA Power,** you can extend the life of your power distribution and control equipment through predictive and preventative maintenance programs which we can assist you in developing and performing.

**As a NETA certified service provider,** at your convenience, we would like to review your needs and current programs to evaluate what electric services we may provide to your business.

## ELECTRICAL SAFETY ASSESSMENT

Our complimentary on-site **Electrical Safety Assessment** will identify potential hazards and OSHA/NFPA 70E® violations. This consists of a review of the following major items:

- Engineering Documentation, including one-line drawings;
- Most Recent Arc Flash Hazard Analysis Warning Labels;
- Personal Protective Equipment (PPE);
- Preventive Maintenance Practices and Procedures;
- Safety Training Program.

Based on the findings of this Electrical Safety Assessment, we will provide comments and recommendations regarding your facility.

The electrical safety assessment and recommendations are based on industry-wide consensus standards.

## Why Choose RESA Power?

RESA Power is the power solutions company you can trust to handle every aspect of your power equipment needs. Years of experience have guided us to make sure our customers have access to everything they need, from engineering and design to installation and electrical maintenance and testing services.

We live our motto,  
"Reliable and Safe. The Power of Us,"  
as we perform our daily operations safely, efficiently, and thoroughly while empowering and enabling our customers to do the same.
