

# SAFE ACCESS

To Transformer Oil Sample & Nitrogen Service Lines

## Sample Guard

### Enclosures for cabinet style transformers

Arc flash boundaries prescribed by NFPA 70E place severe restrictions regarding work on energized padmount transformers. The 24/7 operating tempo of many industrial companies makes it difficult to remove this equipment from service, even for a brief period. How can technicians gain safe access without disrupting operations?

- ☑ **Sample Guard** enables safe access to oil sample and nitrogen service lines by relocating them to an enclosure mounted outside the transformer. Technicians can pull oil samples and service the nitrogen blanket with zero risk of Arc Flash.
- ☑ **Sample Guard** comes with all the necessary hardware and is easy to install. The NEMA powder coated box will last for years in all types of weather.

To Prevent Arc Flash, Choose Sample Guard for Safe Access
